- 4) Brief description of the interest conveyed or transaction to be recorded;

The present patent application is about schemes that can help making different types of large speed ratio eccentric gearboxes with selectable speed ratio. In this gearbox, many eccentric gear pairs are assembled in parallel, and are connected to a common input shaft and a common output shaft. In an eccentric gear pair, one gear called fixed gear keeps its orientation unchanged with respect to a fixed part and another gear called a moving gear, rotates about its own axis. The point of contact is moved on to the pitch circle of the fixed gear through some mechanism connected and the moving gear is connected to an output shaft. Difference in number of teeth on the two gears of an eccentric gear pair is kept to one tooth or more. Through proper selection of a particular gear pair any speed ratio from available speed ratios can be selected. In this way, it is possible to make a compact gearbox, with multiple (two or more) speed ratios, to have large speed ratios between input and output shafts. These types of gearboxes are useful in many applications mainly where turbines are used as prime movers. Such a gear box can be used in automobiles, robot manipulators, earth moving equipments, space applications, toys, hand held tools and in many other applications.
